size control

Excellence in protection and size control

Nova plastic casings by ViskoTeepak feature excellent oxygen barrier properties, mechanical strength, meat cling (adhesion to meat) as well as outstanding printing properties. Multilayer Nova casings also offer different shrink levels depending on application, making them a perfect match for your food brand.

Nova X

Nova X is a multilayer casing designed for round products. The main applications of Nova X are cooked products (ham, sausages), liver sausage, ground beef, soy products, fresh products, as well as certain cheese products.

As a multi-layer polyamide casing Nova X features high moisture and gas barriers. It gives excellent size control, and is easy to stuff also manually. Nova casings can be supplied shirred, printed, and clipped.

Nova L

Nova L is a multi-layer, oriented polyamide casing. Optimal shrinkage gives it a smooth surface without wrinkles and purge. The casing is constructed of five layers to give the finished product a long shelf life and extremely low weight loss during cooking and storage.

Nova L casings are designed for cooked products that need D-shaped packaging with barrier properties but do not require high shrinkage. The casing has excellent peelability, combined with sufficient meat adhesion to produce wrinkle-free product after cooking

Nova plastic casings are Kosher certified.

and cooling. In addition to meat products, Nova L is also suitable for some cheese products.

Nova HM

Nova HM casing is a multi-layer, oriented casing. It has a higher shrinkage than Nova X or Nova L, giving your product a smooth surface without wrinkles and purge as well as neat corners and perfect ends. Nova HM is designed for products with a shape that is not round, like square-shaped hams.

Nova HM can be used for products that use the casing as the consumer package, as well as for products that will be peeled and sliced at the producer. The multi-layer construction gives the product an extended shelf life, allowing it to be shipped in the casing to customers who want to peel, slice and repack the end product in consumer packaging. Nova HM casing is intended to be used for cooked products that do not require smoking or drying.

Nova XT

Nova XT is a special product with a different than usual orientation for easy tear. Thanks to its five layers, the casing also has good barrier properties. Developed for easy peeling, Nova XT tears like a banana – especially uncooked. The shrinkage of this plastic casing is 10% in both directions.
