# Fibrous casing with first-rate peelability

**Fibrous Easy Peel** is a casing that has a specially-treated inner surface making it easy to peel from the sausage. It is ideal for the production of cooked and/or smoked meats, hams and emulsion type products where easy peeling is required.

In addition to exceptional ease of peeling, the Easy Peel fibrous casing offers excellent stretchability and permeability for high and predictable end-product quality.

## Optimal peelability through reduced adhesion

No matter whether you're processing dry hams, smoked meats, cured meats or other similar products, you can always rely on Easy Peel's first-class peeling and handling properties. The optimal balance between peelability and adhesion is attained through reduced yet precisely controlled casing adhesion.

Easy Peel speeds up your customers' processes, thus improving the efficiency of their operations. Less manual labour is needed for peeling, and in case the end user performs the peeling, the easy and effortless release of cas-

ing also contributes to consumer preference and satisfaction.

## Processing performance second to none

Easy Peel is a strong and reliable casing boasting excellent calibre consistency and permeability. It is thus ideal for the processing of products that are smoked or cooked.

The easy-peeling coating effectively prevents excessive casing adhesion to the meat surface. Therefore, Easy Peel is also the perfect choice for meat products used as sandwich toppings, such as sliced ham.

## As you like it

Fibrous Easy Peel is available shirred, clipped or tied to length, and as reelstock. It can be made in a variety of colours and supplied with up to six-colour prints.

HOW TO CHOOSE

## The basics of Fibrous

ViskoTeepak™ fibrous casings receive their unique properties from a combination of a specially made paper base and a natural cellulosic covering. The paper base imparts strength and dimensional stability making it the best choice for high speed sausage produc-

tion plants. The cellulose impregnation provides permeability to water and smoke, and lets the casing stretch and shrink in accordance with the specific processing requirements of small or large scale producers.
