# Get a firm grip on truly ergonomic manual stuffing

**Fibrous Grip** is a fibrous casing with antislip properties that has been developed with ergonomomy and efficiency in mind.

Easy and effortless stuffing horn mounting results in a more efficient manual stuffing process. Less physical strain on the operator also means reduced incidence of work-related employee absences or disability.

In addition to easy hand stuffing, this ergonomic casing features a traditional matte appearance, a good yield/size ratio as well as excellent mould cling and a better grip during clipping.

In order to further optimize the efficiency of the stuffing operation, the Fibrous Grip casing has been produced with a rougher outside surface. This rougher surface allows for faster handling and horn mounting during the stuffing operation, resulting in higher output, more consistent filling and a more natural outward appearance of the sausages.

HOW TO CHOOSE

### The basics of Fibrous

ViskoTeepak™ fibrous casings receive their unique properties from a combination of a specially made paper base and a natural cellulosic covering. The paper base imparts strength and dimensional stability making it the best choice for high speed sausage production

plants. The cellulose impregnation provides permeability to water and smoke, and lets the casing stretch and shrink in accordance with the specific processing requirements of small or large scale producers.
