# Smoke Barrier

A large, partially open bag of coffee beans is shown on a wooden surface. The bag is made of a multi-layered material, with a brown outer layer and a silver inner layer. The bag is tilted, and some coffee beans are scattered on the surface around it. The background is a light-colored wooden surface with several coffee beans scattered on it.

**Speeding up your  
process to boost  
profitability – with  
minimized weight loss**

# Speeding up your process to boost profitability – with minimized weight loss

**ViskoTeepak™ Fibrous Smoke Barrier** is a fibrous casing with smoke colour and flavour complemented by barrier properties that ensure zero weight loss during production and storage.

While acting as a barrier, the casing also imparts a natural smoke aroma and colour, giving your meat or poultry product a smoky flavour and appearance. By reducing or eliminating the time required for smoking your food products, you can improve yield, productivity and profitability.

## Impermeable barrier coating preventing weight loss

The barrier coating prevents weight loss and oxygen transmission, ensuring a long shelf life and consumer appeal for your smoked product. Increased yields through weight retention also boost the overall profitability of your operations.

The even diffusion of flavour and colour is a further benefit of Fibrous Smoke Barrier – there are no fluctuations in smoke aroma or intensity. Nor are there any rack marks left on the surface of the smoked product. By using this unique casing solution, smoked products can also be manufactured with a remarkably lessened environmental load.

## As you like it

Fibrous Smoke Barrier is available with low, medium and high smoke concentrations.

**Low:** For products that require a light smoke colour with only a hint of smoke aroma.

**Medium:** For products that require a moderately strong smoke colour and a clearly perceptible aroma of medium intensity.

**High:** For products that require intensive smoke aroma and colour.

It also has all the advantages of tried and true fibrous casings: calibre consistency, excellent curing properties, an optimal balance between adhesion and peelability as well as a wide range of attractive colours and printing options.
