## Nova Plastic Casings: Engineered for Proven Value

To read the whole article, please click on one of the links below.

Operational efficiency, yield, and throughput are key drivers of profitability in today's food industry — and casing choice plays a central role. ViskoTeepak's Nova plastic casings are tailor-made solutions designed to meet these challenges, helping customers lower total costs while maintaining consistent quality.

This first article in a three-part case study series highlights Nova RHC (Robust High Control), developed to meet the growing demands of high-speed automation. With exceptional strength and precise sizing control, Nova RHC delivers unmatched reliability in automated peeling. Tailored to each customer's production line, it provides maximum efficiency, higher yields, and proven value in automated operations.

Key features of Nova RHC include:

- **Controlled Shrinkage:** Precisely calibrated to optimize casing release and maximize product yield, ensuring every ounce of product is sold.
- **Customized Gauge:** Engineered for the exact thickness required to handle rigorous automated handling, filling, and transportation demands without failure.
- **Advanced Thermofixation:** Improves dimensional stability for consistent shape and significantly minimizes fragmentation, protecting both product integrity and equipment.
