about our team

# Jos Bloemen: Project Coordinator & Drafting.

Jos Bloemen has been part of ViskoTeepak since 1985, starting during a difficult economic period in Belgium. He began as a draftsman at Teepak, the company's former name, and quickly secured a permanent position after colleagues left the department. From the beginning, Jos was drawn to the international nature of the company and the wide variety of mechanical and chemical techniques involved in the work. Today, he works as a Project Coordinator & Drafting, combining his deep technical expertise with project management.

Outside of work, Jos enjoys cycling, walking, and running in the natural surroundings of Lommel, where he lives with his partner, Inge, and their three children. He's also passionate about flight simulation, which he describes as both an educational challenge and a thrilling way to explore the world from his home cockpit.

## Evolution & Legacy

Jos's career has seen remarkable technological shifts. In the 1980s, drafting was done entirely by hand — a time-consuming process using pencils, ink pens, and erasers. The shift to digital design in the late 1980s marked a major turning point, allowing for faster and more precise work. The biggest leap came with the introduction of 3D design, which enabled the team to create digital twins of the factory and streamline production processes.

One of the biggest milestones in Jos's career was the construction of WP3 in 2015. This large-scale project involved installing a new Wienie-Pak machine and expanding the chemical department. Jos played a key role in managing the mechanical and piping aspects. The project was delivered on time and within budget — a testament to the strong teamwork and expertise within the company.

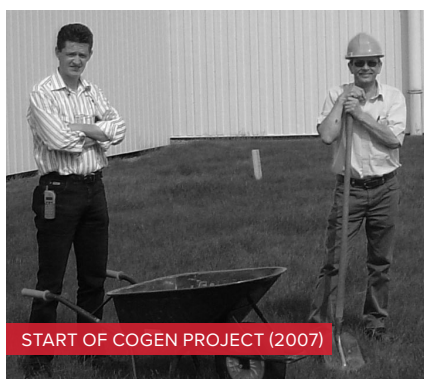

"What I have always appreciated is the open company culture. I have also learned that teamwork is essential

to achieving the best results. I have fond memories of the great collaborations with other locations. I had the opportunity to visit Brno and Hanko several times, where the cooperation with colleagues was always smooth and enjoyable."

## Looking ahead

Jos believes that creativity and innovation will be key to overcoming future challenges. Over the years, he has seen how improvements in production and quality control have helped ViskoTeepak remain competitive. The transition to 3D design, enhanced data analysis, and quicker decision-making has all contributed to more efficient processes and better product consistency.

Looking ahead, Jos highlights the importance of adapting to new techniques and meeting evolving environmental regulations. He emphasizes that collaboration and open communication — values that have shaped ViskoTeepak's culture — will remain essential for future success. "To succeed, we need to listen to each other's ideas and stay open to change," Jos reflects.

**“If you described ViskoTeepak in one word, what would it be?”**

“Trustworthy. The past 40 years have truly flown by. I have always worked at ViskoTeepak with great pleasure and motivation, and I will continue to do so for some time. Throughout the years, ViskoTeepak has always been a fantastic and trustworthy employer.”
